

DigiKeyer and DX4Win setup

Router setup:

Note: The absolute port numbers do not matter. The key is consistency - the same port number must be used for a specific function every time it is used.

1. Assign the radio control virtual COM port.
2. Assign a port for PTT and CW.
3. Assign a port for FSK and check the PTT box. If your radio does not support FSK or you will be using AFSK, you can skip this step.

4. Save the settings to a preset by selecting **Preset | Save as**. Choose a position and name it DX4Win.

DX4Win setup:

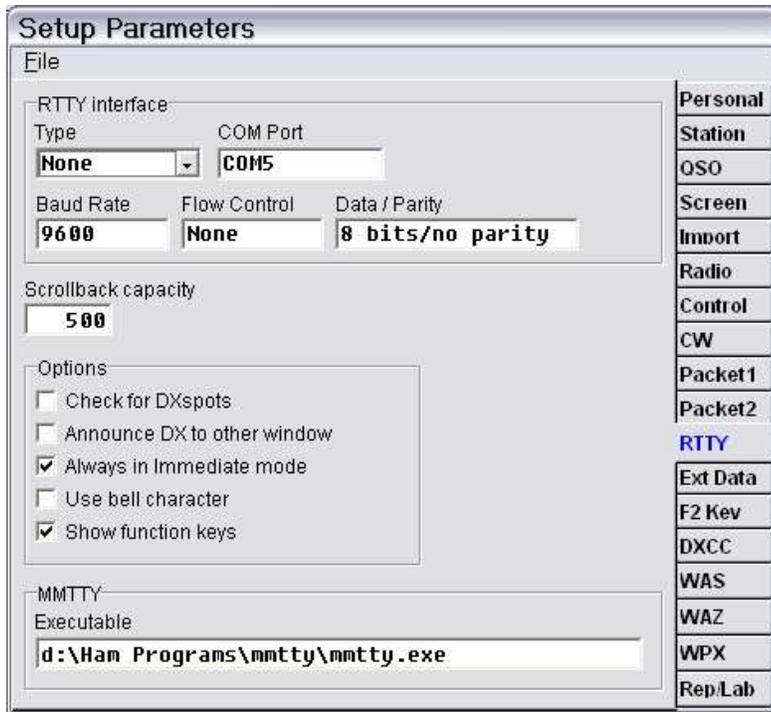

1. Click **File | Preferences** to open the Setup Preferences notebook ...

The screenshot shows the 'Setup Parameters' dialog box with the 'Radio' page selected. The 'Radio' section is active, showing the following settings: Type: YaesuFT2000-U8c, Address: 00, Baudrate: 4800. There are checkboxes for 'Default' under both Address and Baudrate. The 'Notes for radio' field contains 'Modified by ON4AOI and K2RD'. The 'COM Port' is set to COM4, Poll rate (ms) is 500, and Max tries is 6. There are checkboxes for 'DTR high' (checked) and 'RTS high' (unchecked). The 'Second Radio' section is also visible, with Type: None, Address: 00, Baudrate: 0, and similar settings for COM Port (COM1), Poll rate (500), and Max tries (6). A vertical sidebar on the right contains buttons for various pages: Personal, Station, QSO, Screen, Import, Radio (highlighted), Control, CW, Packet1, Packet2, RTTY, Ext Data, F2 Key, DXCC, WAS, WAZ, WPX, and Rep/Lab.

2. Select the Radio page and assign your radio Assign the radio to the virtual COM port you used in Router's Ports tab
3. Set the Baudrate required by your radio.
4. For Icom and certain TenTec radios, set the CI-V address.

5. Select the CW page
6. Select **DX4WIN** as the CW Device type
7. Set the virtual port you chose for CW and PTT on Router's Ports tab for the Interface.
8. Set DTR line to CW Keying.
9. Set RTS line to PTT control.

The screenshot shows the 'Setup Parameters' dialog box with the 'CW' page selected. The 'Device type' is set to DX4WIN and 'Radio 1/2 signal' is set to None. The 'Software CW keying / PTT control' section is active, showing: Interface: COM5, PTT delay: 10, DTR line: CW keying, and RTS line: PTT control. The 'External keyer' section shows the Port set to COM1. The same vertical sidebar from the previous screenshot is visible on the right, with the 'CW' button highlighted.

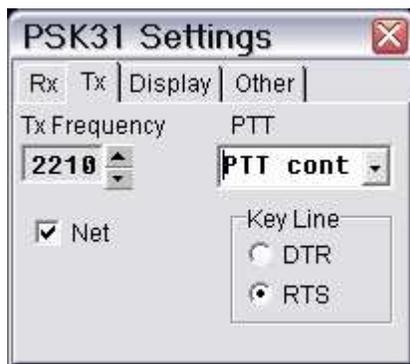

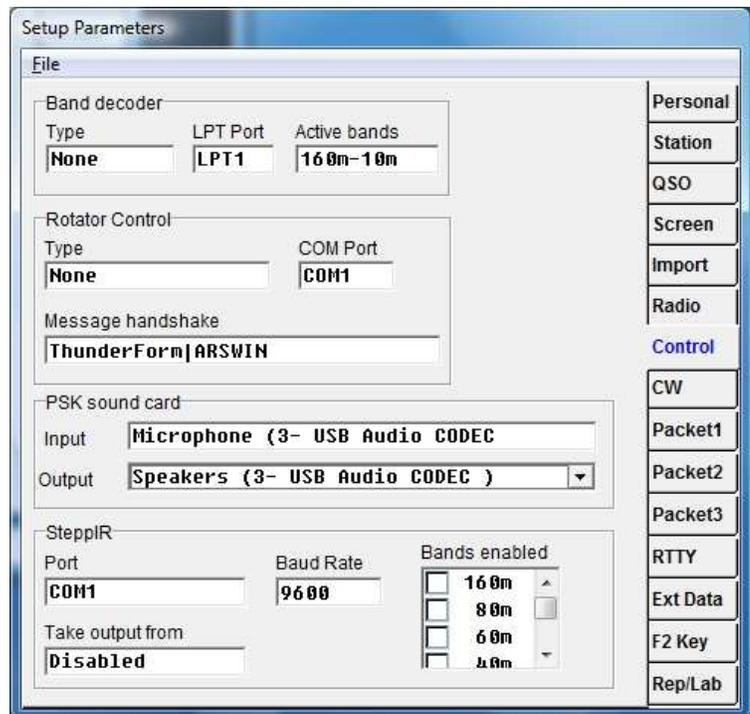

10. Select the RTTY page.

11. Enter the path to the MMTTY Executable file.

12. Select the Control page.

13. Select the **PSK sound card**.

For DigiKeyer, set the Input to "Microphone (USB Audio CODEC)" and set the Output to "Speakers (USB Audio CODEC)"

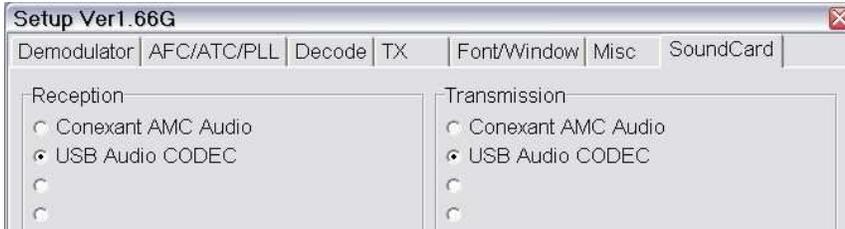

14. Open the PSK31 window (ALT-3)

15. Open the PSK31 settings (ALT-S)

16. Select the TX tab and set PTT to "PTT control"

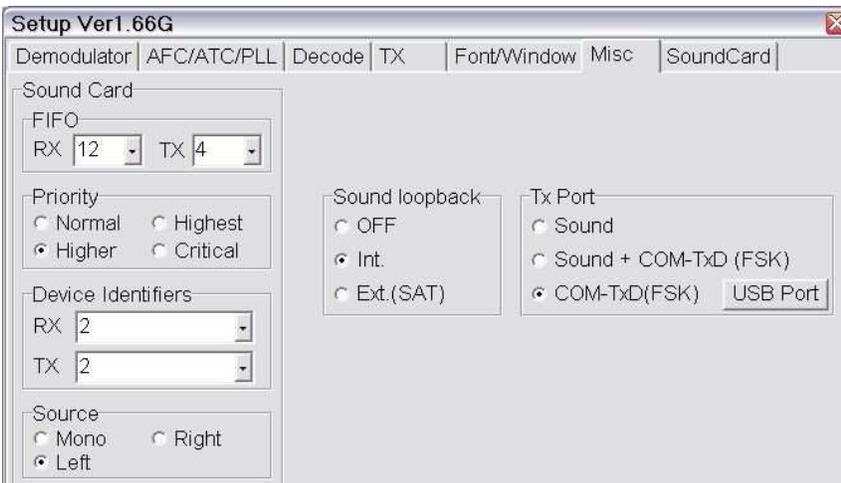

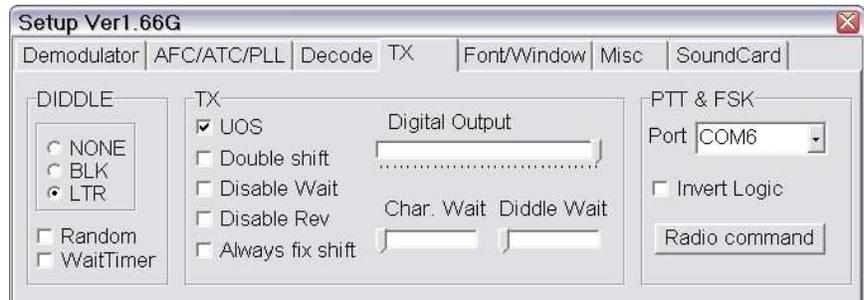

MMTTY setup:

If you plan to operate FSK with the MMTTY window you will need to first configure MMTTY in stand-alone mode.

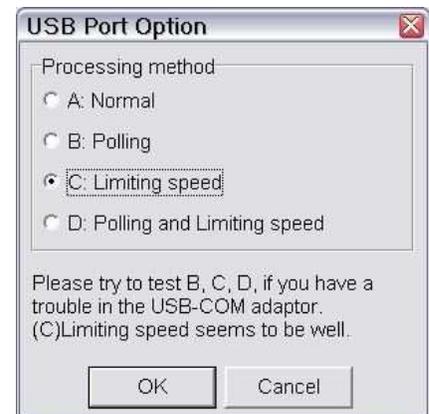

1. Open MMTTY from the Start menu.
2. Select the "SoundCard" tab.
3. Select USB Audio CODEC for Transmission and Reception.

4. Select the TX tab
5. Set PTT & FSK to the port used for Router's FSK port.
6. Select the Misc Tab

7. Select **Source = Left**
8. Set Tx Port to COM-TxD(FSK)

9. Click **USB port** button, choose **C: Limiting speed** and click OK
10. Click "OK" on the Misc tab to close the MMTTY Set-up for Radio 1
11. Start DX4Win and open the MMTTY Window

12. Open the MMTTY Window Keying Settings (ALT-S)
13. Select "PTT control" and RTS
