

DigiKeyer and Win-Test Setup

Router setup:

Note: The absolute port numbers are not important. The key is consistency - the same port number must be used for a given function every time.

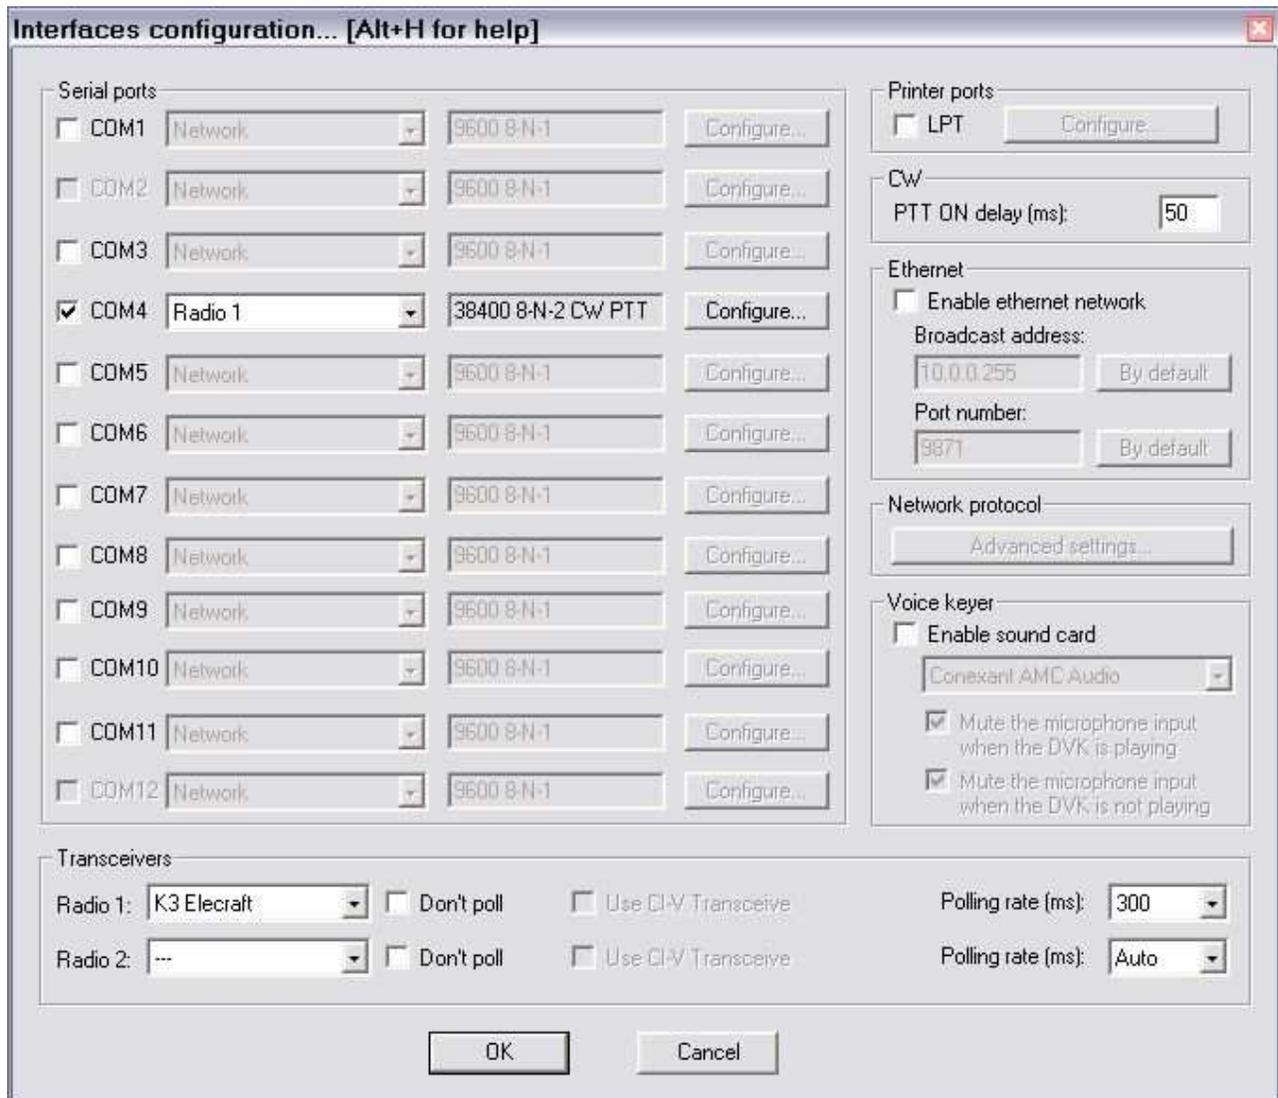

1. Assign one virtual port for CAT, CW and PTT.
2. Assign a port for FSK. If you will not be doing FSK RTTY (using MMTTY) you can leave the FSK port unassigned.

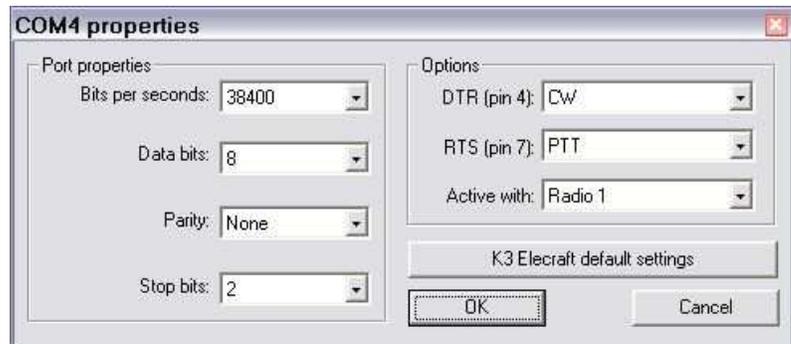

3. Serial Port PTT on the Keying tab should be set to PTT and PA PTT/LNA PTT checked as appropriate for your equipment configuration.
4. Save your settings to a preset by selecting menu **Preset | Save as**. Choose a position and name it Win-Test.

Win-Test setup:

1. Click **Options | Configure Interfaces**

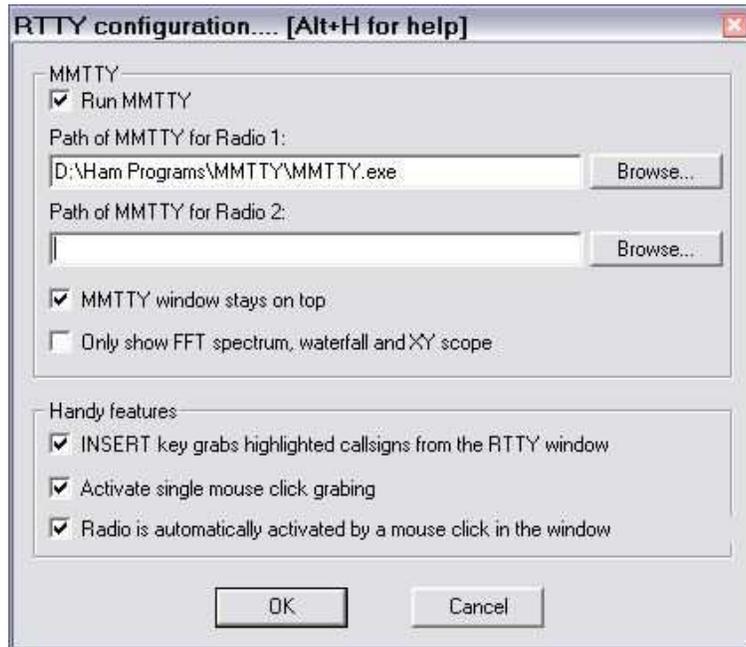

2. Check the port you chose for CAT, CW and PTT.
3. Set the interface to Radio 1.
4. Click "Configure" and set the port properties for your transceiver.
5. Set DTR to CW and RTS to PTT.

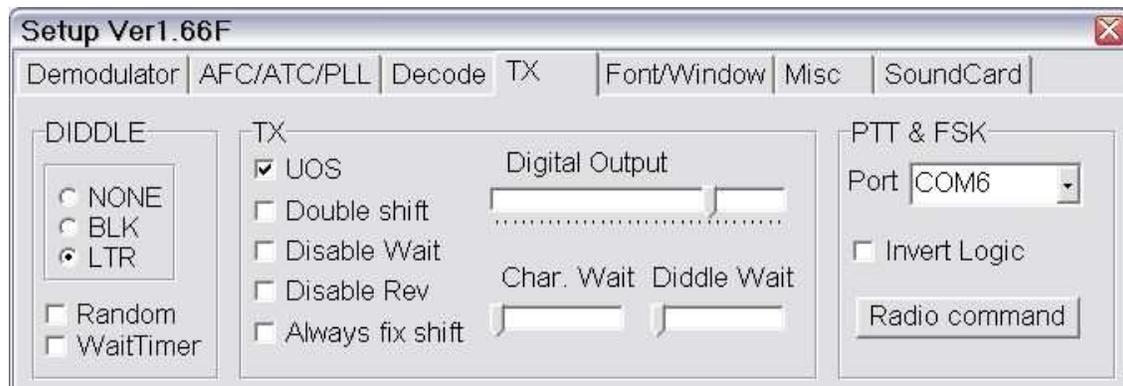

RTTY/Digital setup:

FSK operation with DigiKeyer and Win-Test requires the use of MMTTY.

1. Install MMTTY on your computer.
2. Select **Options | RTTY Configuration**
3. Check "Run MMTTY"
4. Enter the path to MMTTY
5. Make any other selections based on your operating preferences but do not check "Only show FFT spectrum, waterfall and XY scope" at this time.
6. Start/open a RTTY contest so that MMTTY is running.
7. Select **Option (O) | Setup (O)** on the MMTTY Spectrum/waterfall window.
8. Select the TX tab

9. Set the PTT & FSK Port to the Port you selected for FSK in Router

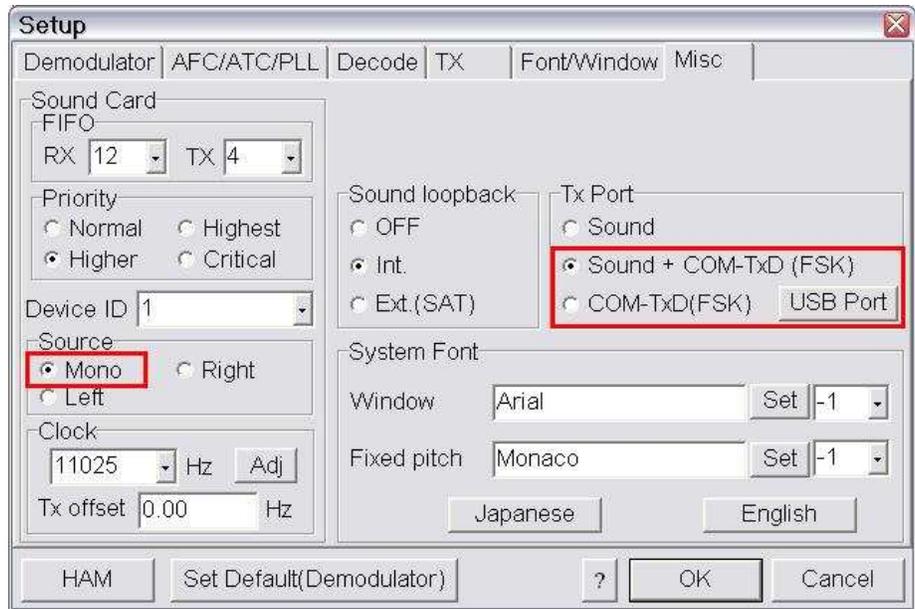

10. Select the Misc tab.
11. Select **Source Mono**
12. Select clock **11025**
13. Select proper Sound card **Device ID** number.

To obtain the proper ID, click **Get ID** button on Router's **Keying** tab.

14. Select COM-TxD (FSK) for the TX Port.

If you want the option to switch between AFSK and FSK, select Sound + COM-TxD (FSK)

15. Click the USB Port button
16. Select "C: Limiting speed"
17. Click "OK"
